

## NEW STANDARDS IN MAJOR DAMAGE RESTORATION.

### EVERY MINUTE COUNTS.

Reducing downtime is a top priority. The new BELFOR electronics refurbishment trailer allows to do decontamination directly at the damage site and, in addition to a highly professional restoration, offers enormous time savings of up to 25%.

### NO COMPLICATED LOGISTICS REQUIRED.

The self-sufficient, fully air-conditioned E-Trailer is already equipped with all the equipment needed for restoration and can start immediately if required. No existing infrastructure or free space on site is required. The work takes place in the E-Trailer. The installed restoration line inside offers everything from spray booths to drying cabinets for the perfect decontamination of electronic and mechanical components. The components and assemblies are then reassembled by BELFOR experts and are ready for immediate use.

### THE E-TRAILER OFFERS MANY OTHER ADVANTAGES.

In addition to mobile decontamination equipment for use on site, it also offers a fully equipped office where the BELFOR project manager can communicate with the customer in person or by video conference and document the damage in a timely and transparent manner.

- Up to 25% time savings during restoration process
- Immediately ready for use
- Transparent service directly on site without extra transport routes
- Complete restoration line in E-trailer
- Protection against electrostatic discharge (ESD protection)
- Integrated wastewater management
